Medicare Adds More Features to "Find us" Online Service

MapData Sciences Pty Ltd (MDS) has completed the latest updates to Medicare Australia's "**Find us**" location service. The service now provides additional information regarding **wheelchair access** and where **assistive listening devices** are available. The mapping interface has also been updated to include MDS latest presentation and navigation features such as pan and zoom.

The relationship with Medicare Australia goes back to 2002 when MDS first developed and hosted the Medicare "find us" interactive locator. Since that time, various changes have been made to the application as Medicare provides more information and services.

Accessing the office information and services through the "Find us" interactive locator has significantly reduced Medicare Australia's inbound calls and improved customer satisfaction and service. This latest update makes the service invaluable for citizens requiring wheel chair access or assisted hearing.
